You can administer your VivoSites-hosted site(s) by logging in to your Site Manager (Control Panel). This can be done at <http://yourdomain.com/manager/> (making sure to replace yourdomain.com with your domain name). Enter the Username and Password that you received in your Setup Instructions e-mail. Once you are logged in Site Manager, you will be able to:

- Setup e-mail accounts,
- Setup FTP user accounts,
- View statistics for disk space and bandwidth,
- Backup and restore files,
- Install/modify applications,
- Manage your web server, e-mail server and FTP,
- View traffic statistics,
- Manage your DNS information,
- Make changes to your site with File Manager,
- and much much more
